Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Klotzman. Klotzman shows a valve with inlet 5 and bypass outlet 4. Piston assembly is biased closed by spring 21 both at normal system pressure (between the recited thresholds) and below the second threshold. In the first open position, the entire assembly rises off seat 8 (Fig. 2), and below the first threshold, inner piston member 17 opens seat 15 (Fig. 1) to bypass.

Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 7-16 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nozawa et al. (Fig. 4) shows a similar valve, where biased open valve 140 is closed as pump pressure rises. As pump pressure reaches a relief value, main piston 130 (which carries valve 140) opens against spring 134. Coakley shows a similar operation, but with a single piston and spring. Low pressure leaks to bypass at slot 42, which leak is closed at initial pressure build up. High pressure is vented as piston head 36 is pushed back against spring 40 to expose vent port 46.
